## Masimo SET<sup>®</sup> Measure-through Motion and Low Perfusion and rainbow SET<sup>™</sup> Technology in a Tetherless, Wearable Patient Monitor

### The Power of Masimo's Breakthrough Measurements in a Patient-worn Monitor

With Masimo SET<sup>®</sup> and rainbow Acoustic Monitoring<sup>®</sup> technology and wireless communication, Radius-7 is designed to allow patient mobility along with continuous monitoring.

(<https://player.vimeo.com/video/113307746?texttrack=en>).

## Small, lightweight, wearable design promotes patient comfort and ambulation

- › Eliminates the need for clinicians to disconnect the monitor each time the patient gets out of bed
- › Two "hot-swappable," rechargeable modules minimize monitoring interruption

## Wireless connectivity

- › Communicates via Bluetooth® to Root® for continuous bedside monitoring and alarm notifications
- › When out of Bluetooth range, Radius-7 communicates via Wi-Fi to Masimo Patient SafetyNet™± for continuous supplemental monitoring and remote

clinician alarm notifications\*

- When out of Bluetooth and Wi-Fi range, Radius-7 acts as a standalone, wearable monitor which stores up to 6 hours of data

When out of Bluetooth range, Radius-7 communicates via Wi-Fi to Patient SafetyNet and maintains continuous communication with the hospital's EMR\*\*
